[linkedin.com/in/strahinjamilosevic](https://www.linkedin.com/in/strahinjamilosevic) | all-maker.com | strahinjamilosevic.com

Senior technical writer and documentation engineer with seven years across fintech, payments, crypto, and industrial hardware. I build documentation as a product: information architecture, publishing pipelines, and content governance. Sole writer behind Bitvavo's developer portal (73,000+ new users in its first year), working daily with docs-as-code, OpenAPI, and AI-augmented workflows.

EXPERIENCE

Bitvavo – Senior Technical Writer

November 2024 - Present

- Replaced the Redocly site with a [Docusaurus developer portal](#) within 4 months of joining, as sole technical writer and docs engineer for the Exchange domain (5 teams, 50+ developers). Reached 73,000+ new users in the first year and a peak of 10,000 monthly active users.
- Documented the full exchange API portfolio: 8 APIs spanning trading, market data, RFQ, and institutional subaccount and leveraged-account management. Standardized them as OpenAPI (REST), AsyncAPI (WebSocket), and XML (FIX).
- Restructured 12,000+ lines of API definitions into a modular single-source repository. This enabled schema-generated examples and AI-assisted workflows, and removed the tech debt blocking framework upgrades.
- Set up the Kubernetes deployment and CI/CD pipeline for the docs platform, working with platform and DevEx teams, and took over pipeline ownership to enable same-day releases.
- Redesigned the information architecture: use-case navigation, Algolia search indexing parameter-level content, reusable shared topics, and date-based release notes with RSS and breaking-change previews.
- Secured Bitvavo's verified Postman publisher status and launched a public REST and WebSocket workspace with an authentication environment and signature-generation scripts.
- Launched an API governance initiative with staff engineers covering naming, authentication, rate limits, error handling, and backward-compatible change management.

Adyen – Technical Writer

November 2021 - November 2024

- Rebuilt the [in-person payments information architecture](#) after interviewing internal stakeholders and clients and validating the findings in Google Analytics. Cut navigation from 67 items under 10 labels to 47 under 7, increasing section traffic by about 25% and reducing negative feedback within a year.
- Documented the full in-person payments portfolio with product and engineering: cloud and local point-of-sale integration, payment processing, terminal features, and payment terminal manuals.
- Authored and maintained REST API references for in-person payments in source code and migrated them from static docs to Adyen's [API Explorer](#).
- Led the OpenAPI migration of the [Terminal API](#), a non-REST API based on the nexo retailer protocol. Mapped the specification, coordinated the implementation and API platform teams, and co-developed a Python generation script and a new API Explorer page type.
- Documented the internal Logistics API from Stoplight mockups while it was in development, enabling partners to migrate off a legacy messaging system before the deadline. Simplified the request and response schemas along the way.
- Shaped API design as a member of the API review group, improving naming and endpoint consistency across products.
- Mentored technical writers and interviewed dozens of candidates, contributing to the hiring framework.

ProGlove – Technical Writer

July 2020 - October 2021

- Built ProGlove's [documentation portal](#) from zero as the first and sole technical writer. Within a year it went from a minimal MkDocs site to a multi-product portal with versioning, release notes, media, and automatically updated API references.
- Introduced the Paligo CCMS, migrated all existing content using Pandoc and custom scripts, and designed the information architecture across hardware, software, and APIs.
- Designed the portal's visual layer: custom Paligo components and HTML/CSS aligned with the brand, plus all diagrams, screenshots, and short tutorial videos.
- Wrote UX copy for the web portal where customers configured scanner workflows, for the scanner displays, and for the iOS and Android apps.
- Authored OpenAPI references for the public APIs and maintained the developer portal as docs-as-code (Markdown, Git, Travis CI, Amazon S3).
- Set up contribution and review workflows across documentation, product, development, and QA, removing review bottlenecks and speeding up publication.

eFront (part of BlackRock) – Junior Documentation Engineer → Technical Writer

March 2019 - June 2020

- Authored a 150-page product manual for eFront Insight, an investor analytics platform for fund managers.
- Documented APIs in source code using OpenAPI (Swagger), Visual Studio, and Git.
- Designed documentation taxonomies across multiple products, applying topic-based authoring, content reuse, and single sourcing.
- Wrote developer setup documentation for an in-house .NET application.

NCR – ATM Incident Management Agent

March 2015 - March 2019

- Monitored and resolved ATM incidents for Barclays and National Australia Bank through remote resolution and ticketing systems (Oracle).
- Coordinated live incident resolution between customer engineers, logistics teams, clients, and third-party vendors, translating technical faults into clear instructions for on-site personnel.
- Enforced security protocols during engineering calls, including vault access procedures for field engineers.
- Managed ATM replenishment schedules across the client estate.

SKILLS

Technical writing, docs as product, content strategy, content governance, API documentation, developer documentation, developer experience, UX writing, docs-as-code, content and knowledge architecture, information architecture, API governance, agentic automation, AI-augmented workflows.

TECH STACK

Site generators (Docusaurus, Astro, etc.), Redocly, Paligo (CCMS), Git, GitHub, GitLab, Markdown, OpenAPI, AsyncAPI, FIX, Postman, Stoplight, Algolia, Docker, Kubernetes, Cloudflare, Python, Java, TypeScript, Claude, Cursor, Codex CLI, GA4, Jira, YouTrack, ClickUp

EDUCATION

MA, English Cultural Studies; BA, English Language and Literature, University of Belgrade
